TECNOSTONE COLLEZIONE

I PRODOTTI TECNOSTONE HANNO COME BASE COSTANTE LA POLVERE DI “PIETRA NATURALE” PROVENIENTE DA CAVE SELEZIONATE CHE, SAPIENTEMENTE DOSATA CON LEGANTI RESINOSI DI ALTISSIMA QUALITÀ, FORNISCE UN PRODOTTO FINALE INEGUAGLIABILE E DIFFICILMENTE RICONOSCIBILE DALL’ORIGINALE ANCHE AD UN OCCHIO ESPERTO. LA QUALITÀ E LA REATTIVITÀ DEI MATERIALI SONO INOLTRE GARANTITE E CERTIFICATE SECONDO LE NORME EUROPEE E NORD AMERICANE, RELATIVAMENTE ALLA RESISTENZA AL GELO, ALLA LUCE, AD AGENTI CHIMICI DOMESTICI ED ADDITIVI VARI.

TECNOSTONE COLLECTION

TECNOSTONE PRODUCTS MADE THROUGH THE FINEST “NATURAL STONE” DUSTS CAREFULLY SELECTED FROM PREMIUM GRADE QUARRIES BLENDED WITH QUALITY RESINS, RESULT IS A FINAL PRODUCT UNIQUE AND HARDLY RECOGNIZABLE FROM THE ORIGINAL. PRODUCTS ARE GUARANTEED AND CERTIFICATE FOLLOWING EUROPEAN AND NORD AMERICAN STANDARDS TO BE FROST PROOF, LIGHT PROOF AS WELL AS RESISTANT TO DOMESTIC CHEMICAL AGENTS.

CERTIFICATIONS

TECNOSTONE è un prodotto certificato secondo le più severe norme europee e nord americane.

TECNOSTONE is a certified product according to the strictest European and North American standards.

ESPANSIONE LINEARE AL VARIARE DELLA TEMPERATURA

LINEAR THERMAL EXPANSION

TCNA — Tile Council of North America, Inc.
PRODUCT TESTING SERVICE
100 Clemson Research Blvd. Anderson, SC 29625 Tel (864) 646-TILE Fax (864) 646-2821

TCNA TEST REPORT NUMBER: TCNA-585-14 **PAGE:** 1 OF 2

TEST REQUESTED BY: SDR CERAMICHE SRL

TEST METHOD: **ASTM C372: "Standard Test Method for Linear Thermal Expansion of Porcelain Enamel and Glaze Frits and Fired Ceramic Whiteware Products by the Dilatometer Method"**

This test method covers the determination of the linear thermal expansion of ceramic whiteware products by the thermal dilatometer method. This test method consists of determining the linear thermal expansion of ceramic and glass tile using a dilatometer between the temperatures of 25°C (77°F) and 100°C (212°F).

TEST SUBJECT MATERIAL: Identified by client as: "_____"
Approximate Size as Received: 6"x6"

TEST DATE: 10/8/2014

TEST PROCEDURE:

- Sample Prep: Sample was cut to approximately 25 mm x 8 mm x 8 mm
- The linear thermal expansion was determined using a Netzsch 402C Dilatometer located at the Bishop Materials Laboratory, Clemson University.
- The temperature range was 25°C - 100°C.

TEST RESULTS:

Temperature Range (°C)	Linear Thermal Expansion (per °C)
25°C to 50°C	19.6084 x 10^{-6}
25°C to 80°C	25.5609 x 10^{-6}
25°C to 100°C	29.7947 x 10^{-6}

TCNA TEST REPORT NUMBER: TCNA-585-14 **PAGE:** 1 OF 2

TEST REQUESTED BY: SDR CERAMICHE SRL

TEST METHOD: **ASTM C97: "Absorption and Bulk Specific Gravity of Dimension Stone"**

Informal Test Method Description: These test methods cover the tests for determining the absorption and bulk specific gravity of all types of dimension stone, except slate. These test methods are useful in indicating the differences in absorption between the various dimension stones.See ASTM C97 for all method details and information.

TEST SUBJECT MATERIAL: Identified by client as: "----------"
Approximate Size as Received: "

TEST DATE: 3"x3"x3" 10/13/2014 – 10/15/2014

TEST PROCEDURE:

- Sample prep: None
- The specimens were dried in an oven for 48 hours before a dry weight was recorded for each specimen.
- The specimens were then submerged in water for an additional 48 hours before measuring the saturated and suspended weights.
- The weight percent absorption and the density were then calculated based on the weight measurements made.

TEST RESULTS:

	% Water Absorption	Density (lb/ft³)
Specimen 1	0.08	114.2
Specimen 2	0.07	109.5
Specimen 3	0.07	118.6
Specimen 4	0.06	119.1
Specimen 5	0.07	117.9
Average:	0.07	115.9

COMMENTS: None

TCNA TEST REPORT NUMBER: TCNA-585-14 **PAGE:** 1 OF 1 TEST

REQUESTE BD Y: SDR CERAMICHE SRL

TEST METHOD: **ASTM C482-02 (2009): "Standard Test Method for Bond Strength of Ceramic Tile to Portland Cement"**

Informal Test Method Description: This test method covers the determination of the ability of glazed ceramic wall tile, ceramic mosaic tile, quarry tile, and pavers to be bonded to portland cement paste. This test method includes both face-mounted and back-mounted tile. This test method consists of bonding tile under controlled conditions to a pure portland cement paste bond coat, supported by a cement mortar bed.

This summary is provided for the reader's convenience and is not a complete description of the method. See ASTM C482 for all method details and information.

TEST SUBJECT MATERIAL: Identified by client as: "_____"
Approximate Size as Received: 4"x4"

TEST DATE: 10/9/2014 – 10/16/2014

TEST PROCEDURE:

- Sample prep: None
- **The ASTM C482 test method was modified per the client's request*.** The client requested to test the bond strength of tile to a concrete substrate using an epoxy.
- Four (4) bond strength specimens were created by securing the tile specimens to 1-½ x 7-½ x 15-½-inch concrete blocks with Laticrete Latapoxy 310.
- The specimens were cured for seven (7) days before testing. The specimens were loaded in shear at a rate of 200 psi/min.

TEST RESULTS:

	Bond Strength (psi)	Mode of Failure
Specimen 1	691 psi	Failure within stone
Specimen 2	1150 psi	Partial block failure, partial stone failure
Specimen 3	758 psi	Block failure
Specimen 4	707 psi	Block failure
Average	827 psi	

***COMMENTS:** The ASTM C482 test method was modified per the client's request. The method states to bond the tile to Portland cement mortar block using a Portland cement paste. The modifications are described above.

CICLO GELO E DISGELO

RAPID FREEZING AND THAWING

TCNA — Tile Council of North America, Inc.
PRODUCT TESTING SERVICE
100 Clemson Research Blvd. Anderson, SC 29625 Tel (864) 646-TILE Fax (864) 646-2821

TCNA TEST REPORT NUMBER: TCNA-585-14 **PAGE:** 1 OF 1

TEST REQUESTED BY: SDR CERAMICHE SRL

TEST METHOD: **ASTM C666: "Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing", Procedure A: Rapid Freezing and Thawing in Water**

Informal Test Method Description: This test method covers the determination of the resistance of concrete (or other materials) to rapidly repeated cycles of freezing and thawing in water. The test method consists of alternately lowering the temperature of the specimens from 40 to 0°F (4 to -18°C) and raising it from 0 to 40°F (-18 to 4°C) in not less than 2 nor more than 4 hours (not less than 25% of the time is used for thawing). The number of freeze-thaw cycles is recorded and typically after 300 cycles the test load is visually examined for damage, checked for percent weight loss, percent length change, and a durability factor is calculated based on the relative dynamic modulus of elasticity.

This summary is provided for the reader's convenience and is not a complete description of the method. See ASTM C666 for all method details and information.

TEST SUBJECT MATERIAL: Identified by client as: "_____"
Approximate Size as Received: 3" x 3"

TEST DATE: 10/13/2014 – 10/27/2014

TEST PROCEDURE:

- Sample Prep: None
- All testing was performed by The Bishop Material Laboratory of Clemson University.
- The specimens were subjected to fifty (50) cycles of freezing the specimens in water from 40 to 0°F and then thawing the specimens in water from 0 to 40°F per the client's request
- Since only 50 cycles were performed, the relative dynamic modulus of elasticity was not measured. The percent weight change and any visual observations are reported below.

TEST RESULTS:

		Specimen 1	Specimen 2	Specimen 3	Specimen 4	Specimen 5	Average
Weight Change after 300 Cycles	Initial Weight (grams)	143.4 g	142.3 g	132.5 g	151.0 g	146.3 g	---
	Final Weight (grams)	143.3 g	142.3 g	132.3 g	150.9 g	146.2 g	---
	Weight Change, %	0.1%	0.0%	0.2%	0.1%	0.1%	0.1%
Visual Observations		No visual deterioration	No visual deterioration	No visual deterioration	No visual deterioration	No visual deterioration	---

ARDESIA

È una roccia facilmente divisibile in lastre sottili, piane, leggere, impermeabili e resistenti agli agenti atmosferici. Classificata come pietra compatta, di colore nero è facilmente lavorabile può essere impiegata in vari segmenti artigianali e industriali tanto nell'architettura e nell'edilizia quanto in arte nel design e dell'oggettistica di uso quotidiano.

It's a rock easily divisible into thin, flat, light, impermeable and weather resistant sheets. Classified as a compact stone, black, it is easy to work. It can be used in various craft and industrial segments, in architecture and in building as well as in art, design and everyday objects.

STUCCO

Impasto finissimo usato per il rivestimento e la decorazione di muri e soffitti ed in special modo nel campo dell'arte permette di realizzare figure tridimensionali e statue. L'architettura barocca e rococò ha fatto largo uso di stucchi in palazzi e chiese, per realizzare sovrapporte, cornici tra pareti e soffitti e per contornare aree. Permette inoltre di creare una estensione tridimensionale alle pitture come bassorilievi e trompe l'oeil.

Very fine plaster used for the cladding and decoration of walls and ceilings and especially in the field of art it allows to realize three-dimensional figures and statues. The baroque and rococo architecture have made extensive use of stuccos in palaces and churches, to create overdoors, frames between walls and ceilings and to surround areas. It also allows to create a three-dimensional extension to paintings such as bas-reliefs and trompe l'œil.

RESINA

Con il termine resina si definisce una vasta gamma di prodotti polimerici, che consentono di ottenere sinteticamente caratteristiche chimico/fisiche simili a quelle della pietra, del cemento, della ceramica, del vetro e del legno, ma con proprietà di resistenza all'usura e impermeabilità molto maggiori.
La resina ha conquistato negli ultimi anni un ruolo di primo piano anche in ambito residenziale, dove sono sempre più utilizzate anche per il rivestimento e la decorazione delle pareti.

The term resin defines a wide range of polymeric products that allow to obtain synthetically chemical / physical characteristics similar to those of stone, cement, ceramic, glass and wood, but with much greater wear resistance properties and impermeability.
In recent years, resin has gained a leading role in the residential sector, where it is increasingly used for wall cladding and decoration.

PANNELLI

I pannelli di rivestimento nascono per l'esigenza di:
- avere un angolo doccia "total look" completamente della stessa finitura e colore;
- velocizzare la ristrutturazione della zona doccia, ad esempio con soli tre pannelli possiamo ricoprire lo spazio prima occupato da una vasca.

The covering panels are born for the need of:
- having a "total look" shower corner completely of the same finish and color;
- speeding up the renovation of the shower area, for example with just three panels it's possible to cover the space previously occupied by a bathtub.
